Here are some easy ways for pool, spa and hot tub owners to save water and money!

If you own a pool or in-ground spa:

1. Install a pool cover to significantly reduce water evaporation.
2. Shut off waterfalls, fountains, and other water features to reduce water loss and evaporation.
3. Check the pool for leaks. Contact your pool service professional for guidance.
4. Minimize splashing or lower the pool's water level to reduce "splashout."
5. Plug the overflow line when the pool is in use.
6. Replace sand and DE filters with cartridge filters that do not require backwashing.
7. Keep your pool clean to reduce frequency of backwashing.
8. If your pool is heated, reduce the water temperature to reduce evaporation.

If you own a hot tub or spa:

1. Keep it covered.
2. Maintain the chemicals to extend water life.
3. Check the equipment for leaks.
4. Drain only when absolutely necessary.
5. Check with your pool service professional for new technology that helps keep the water clean and reduce the need to drain the spa.
6. If you drain your spa, reuse the water to irrigate plants and landscaping.
